                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                           The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.

ö
composition is useful for the manufacture of a medicament for treating Alzhaimer's disease and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used in the creation of the compostions and vaccines of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases
                                                                                             Gaps

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one first attachment site; and at least one antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site naturally occurring with the antigen or antigenic determinant. The second attachment site is capable of association to the first attachment site and the beta 1-6 peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The composition is useful for the manufacture of a medicament for treating Alzheimer's disease and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used as an alternative to the human sequence in the compositions and vaccines of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one first attachment site; and at least one antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site in attachment site is capable of association to the first attachment site attachment site is capable of association to the first attachment site is capable of association to the first attachment site composition is useful for the manufacture of a medicament for treating composition is useful for the manufacture of a medicament for treating Alterimer's disease and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used as an alternative to the human sequence in the compositions and vaccines of the invention.

Sequence 6 AA;

Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one second attachment site, where the antigen or antigenic determinant of determinant site a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site of attachment site is capable of association to the first attachment site attachment site is capable of association to the first attachment site of and the beta 1-6 peptide and the core particle interact through the composition is useful for the manufacture of a medicament for treating composition is useful for the manufacture of a medicament for treating of an anyloid beta (Abbeta) 1-6 peptide that can be used as an alternative of an anyloid beta (Abbeta) 1-6 peptide that can be used as an alternative of the house of the anning and anyloid side as an alternative of the anning and and anyloid side as an alternative of the anning and and anyloid and and anyloid anyloid anyloid and anyloid and anyloid any
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the human sequence in the compostions and vaccines of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Staufenbiel M;

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 with at least one attachment site, and at least one article with at least one period. The new composition comprises: a core particle with at least one second attachment site, where the antigen or antigenic determinant confirmant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site currently occurring with the antigen or antigenic determinant. The second attachment site is capable of association to the first attachment site can the beta 1-6 peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The composition is useful for the manufacture of a medicament for treating composition is disease and related diseases. This is the amino acid sequence of an amyloid beta (Abbeta) 1-6 peptide that can be used as an immunogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                 The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                              Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
 ö
                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                               Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                                                                                                                                                                   ö
                                                                           The invention comprises peptides which mimic the N-terminal region of amyloid-beta (ABP-Ala-Glu-Phe-Arg-Hiss). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for terminal AB42 peptide amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
         Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzhelmer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises peptides which mimic the N-terminal region of

The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Indels

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzhaimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.

The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                        The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                     Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises peptides which mimic the N-terminal region of amyloid-beta (ABP-DHa-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzhaimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                            Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            specific for

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 24; DB 8; Length 6; 100.0%; Pred. The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.

The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Preventing or treating a disease associated with amyloid deposits, especially Alzheimer's disease, comprises administering amyloid specific
                                                                       Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                   The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

The invention relates to the field of the neurodegenerative disorder of Alzheimer's disease (AD). In particular, the invention provides a novel mutation (T741) identified in the amyloid precursor protein (APP), PPP714, which ledds to a very aggressive form of AD. The mutation involves the 43rd codon of the amyloid Beta peptide (A-Beta) corresponding to the putative gamma 42-secretise cleavage site. The novel mutation alters both A-Beta40 and A-Beta42 secretion elevating the A-Beta40 ratio by 10-fold in vitro. Furthermore, the main amyloid plaque pathology in brains of these partents is of the diffuse 'pre-amyloid' type composed primarily of N-truncated A-Beta42. Dense-cored plaques although not absent, were significantly reduced. Also, the usual site in brain where A-Beta40 is predominantly deposited, for instance, in vessels as cerebral amyloid anglopathy (CAA) or senile plaque cores, were composed entirely of A-Beta42 form. Together, these indicate that deposition of N-truncated A-Beta42 form. Together, these indicate that deposited in the brain, the diffuse plaques, is fully competent of inciting AD either through the well-established 'amyloid cascade' or by a
                                                                                                                                                                                              ö
Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              modulate the generation of one or more metabolites associated with a disease or disorder comprising determining levels of a cellular component protein or a conformation state of a cellular precursor protein. In particular, the method can be used to determine levels of amyloid precursor protein (APP), which is associated with Alzheimer's disease. It is also useful for identifying compounds as drugs for treating diseases or disorders associated with metabolic and/or proteolytic pathways, e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, lysosomal storage disorders, prion diseases, the tau-based neurodegenerative disorders, and other non-AD amyloidoses. The present sequence is an
   ŏ
yet unknown mechanism(s). This sequence represents a synthetic peptide of A-Beta, residues 1-7 (DAEFRHD). This sequence was used for raising a monoclonal antibody specific for the N-terminus of A-Beta40 and A-Beta42 by immunising mice with the synthetic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                               high-throughput screening; neuroprotective; nootropic; antiparkinsonian.

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D-amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and angiopathy; for altering serum levels of amyloid-beta in a mammal and cavours the clearance of solubbe amyloid-beta in a mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including. Inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposite are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-ABP-C Set-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-CGly ADA89887 or its fragment, and the second region comprises the encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host call comprising the vector (I); (4) preparing (I), comprising the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) cor an antibody molecule produced by method (4); (6) a kit comprising (I) or an expectation of (I), vector of (2) or host cell of (3); (7) optimising (I) composition definition advantage of the experiment of selected, optimised clones; (11) preparing a pharmaceutical composition, composition prepared by method (8). (I) has compressing optimised in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with composition for the prevention and/or amyloid-plaque formation. The antibody molecule composition for the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the
                                                                                                                                                                                                                                                                             antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       regions of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody molecule capable of specifically recognizing two regions the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Huber W, Kretzschmar T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1), comprising culturing the host cell of (3) under conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral hæmorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
disintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloitopis Lateral selerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                regions of

cc or an antibody molecule produced by method (4); (6) a kit comprising (1), octor of (2) or host cell of (3); (7) optimising CC nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising CC (1); (8) testing the resulting Fab optimised clones; (10) expressing against Abeta44; (9) identifying optimised clones; (10) expressing cof selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, prepared by method (8). (1) has neuroprotective, nootropic and antiparkinsonian activities, and can be consect in gene therapy. The antibody molecule (1), nucleic acid molecule, covector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with any also be used in preparing a disease associated with a cof the disease mentioned above. The antibody is used for the detection of beta-amyloid plaques or for passive immunisation adainst beta-amyloid plaques formation. The aminibation adainst beta-amyloid plaques formation. In particular, the disease is constrained formation. In particular, the disease is constrained to adainst but any predictary cerebral haemorrhage with amyloidosis putch type, Parkinson's disease, HIV-related dementia, anyloidosis putch type, parkinson's disease, HIV-related dementia, amyloidosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antibody molecule, antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; s disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Galu-Rha-Asgr-His-Asgr-Gardrag (I) and the second region comprises the amino acid sequence val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Aag-Val-Gly ADA89986 or its fragment. Also described: (1) a nucleic acid molecule cancoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host cencoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host contrained the host cell of (3) under conditions that allow sprinkasis of call comprising the host cell of (1) under conditions that allow sprinkasis of contrained contrained (I) in vector of (2); (4) preparing (I); (3) a prinking of contrained clones; (1) petimising (I); (3) the set of (1) vector of (2) in preparing (I); (3) petimising (I); (3) the set of (3) in the recovering (I); (3) petimised clones; (1) perparing a pharmaceutical composition composition of (I); and formulating the optimised antibody/antibody molecule with a carrier; and (12) a paramaceutical composition prepared by method (8): (I) has composition prepared by method (8): (I) has composition prepared by method (8): (I) has control of the prevention and/or treatment of a disease associated with any also be used in preparing a pharmaceutical composition for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the detection of adainst beta-amyloid plaques or for passive immunisation.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Asg-His-Asg-Gard-Oxprises the amino acid sequence val-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asg-Val-Glu-Aph-By Aph89886 or its fragment, and the second region comprises the cording (I) Aph899810 or its fragment. Also described: (1) a nucleic acid molecule concoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host concoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host culturing the host cell of (3) under conditions that allow spithesis of culturing the host cell of (3) under conditions that allow spithesis of (1); and recovering (I) from the culture; (5) a composition comprising (I); and recovering (I) from the culture; (5) a composition comprising (I); against Abeta/Abeta4; (9) identifying optimisation library by panning of selected, optimised clones; (10) preparing a pharmaceutical composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a charmaceutical composition prepared by method (8). (1) has control of the prevention and/or treatment of a disease associated with a undor treatment of a disease associated with a myloid plaque formation. The antibody molecule composition for the disease mentioned above. The antibody is used for the disease is composition of the disease mentioned above. The antibody is used for the disease is composition of a disease associated with a dementia, Alzheimer's disease, hereditary cerebral hemorrhage with a carrier; and composition of disease is composition of the prevention and/or treatment of a disease associated with a dementia, Alzheimer's disease, metor neuropathy, Down's syndrome. Composition disease, hereditary cerebral hemorrhage of the disease mentioned above. The antibody is used for the dementia, Alzheimer's disease, metor neuropathy, Down's syndrome, amyloidosis Dutc
                                                                                                                                                                                                                                                                             New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                     Huber W, Kretzschmar T;

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

```
The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                          New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                           Claim 4; Page 61; 104pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a treatment of a disease associated with beta-amyloid formula prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 24; DB 8; Length 7;

The invention describes an immunogenic composition (I) comprising a cholera holotoxin (CT) and an antigen covalently associated with CT. CT comprises A subunit (CT-A) having a mutation at amino acid residue 29 of a sequence (SI) of 240 amino acids fully defined in the specification, where the mutation is not aspartic acid, where CT increases immunogenicity of the antigen, (b) CT and an antigen covalently associated with CT. where CT comprises one or more mutations in CT-A, where CT increases immunogenicity of the antigen, (c) Escherichia coli heat labile toxin (LT) and an antigen covalently associated with LT, where LT increases immunogenicity of the antigen, or (d) a pertussis toxin (PT) and an antigen covalently associated with PT, where PT increases immunogenicity of the antigen. Isolated and purified CT, LT and PT polynucleotides and polypeptides, are also disclosed. (1) is useful
                                                              The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents the

The present sequence represents a peptide derived from beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid antisenilin N1/7. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant DNA molecule containing a gene encoding a recombinant antibody end-specific for the N-terminus or the C-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The ceombinant antibody molecules prevent the accumulation of beta-amyloid peptides in the extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the contain. They also inhibit the progression of Alzheimer's disease by inhibiting the interaction of beta-amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease.
                                                                                                                                                                        ö

This invention relates to a novel method for modulating activity of betacts site amyloid precursor protein (APP)-cleaving enzyme (BACE)

secretase/sheddase. Cleavage of BACE by this enzyme results in the generation of a soluble BACE which enhances the production of the awyloidogenic peptide Abeta which has been shown to be involved in the actiology of Alzeimer's disease. Inhibition of BACE secretase can be cachieved by administration of an antisense nucleotide molecule capable of ypridising with BACE mRNA, by using a ribozyme that targets and degrades by accretase mRNA, with a peptide that can interfere with binding of the enzyme with BACE or using an antibody or antagonist that can function as an inhibitor of BACE secretase activation. The methods of the curvedgenerative disorder characterised by the generation of Abeta created and activity of BACE secretase/sheddase by preventing cleavage of BACE, which is useful for the treatment of a comprises a comprises a nethod for identification of an agent that can alter the ability of BACE secretase to associate with and process a known substrate, this method can be used for high throughput screening of candidate molecules. The invention also comprises a method for determining whether an individual is at risk of developing a neurodegenerative disorder characterised by the generation of Abeta products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products in a beta amyloid protein of the invention

The present invention describes an antibody that is targeted to amyloid beta peptide, or its fragment. Also described: (1) an antibody that is tree-end specific and is targeted to: (a) the free N-terninus of amyloid beta-peptide; where the firet amino acid of amyloid beta-peptide is aspartate; (c) the free N-terminus of the free N-terminus of the free N-terminus of the amyloid beta-peptide fragment; (d) the free C-terminus of the amyloid beta-peptide Abetal-13, Abetal-40, Abetal-41 or Abetal-43 or (e) to the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide Abetal-13, and (3) a stiple chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide Abetal-42, and (3) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide Abetal-42, and (3) a single chain or antibody targeted to amyloid beta peptide Abetal-42, and and a carrier. The antibody or its fragment is useful for manufacturing a medicament for carriors anyloid beta deposition (e.g. mild cognitive impairment, correbral amyloid angiopathy or conglophylic angiopathy, Alzheimer's disease associated with Down's syndrome, or inclusion of amyloid beta peptide or the fragment. C for delaying, inhibiting or suppressing accumulation of amyloid beta peptide or the neurotoxicity of amyloid beta applied eor inclusion of amyloid beta peptide or the present sequence represents an amyloid beta peptide which is (App). The present sequence represents an amyloid beta peptide which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                               antibody; amyloid beta peptide; amyloid beta; nootropic; neuroprotective; antibody therapy; Alzheimer's disease; mild cognitive impalrment; cerebral amyloid angiopathy; congiophylic angiopathy; Down's syndrome; inclusion body myositis; neurocoxicity; beta amyloid precursor protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibody that is targeted to amyloid beta peptide, or its fragment, inl for treating a subject having Alzheimer's disease, or a disease or order characterized by amyloid beta deposition, e.g. cognitive

                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an antibody that is targeted to amyloid beta peptide, or its fragment. Also described: (1) an antibody that is tree-end specific and is targeted to: (a) the free N-terminus of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide is aspartate; (c) the free N-terminus of N- and/or C-terminus of the amyloid beta-peptide Abeta-13, Abetal-40, Abetal-41 or Abetal-43; or (e) to the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide Abetal-39, Abetal-40, Abetal-41 or Abetal-43; or (e) to the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide Abetal-42; and (3) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide Abetal-42; and (3) a nutibody targeted to amyloid beta-peptide Abetal-42; and (3) a nutibody targeted to amyloid beta peptide has nootropic and antibody therapy. The antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease, or a disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, cerebral amyloid angiopathy or congiophylic angiopathy, Alzheimer's disease associated with bown's syndrome, or inclusion body myositis), or for delaying, inhibiting or suppressing accumulation of amyloid beta peptide, or the neurotoxicity of amyloid beta peptide or its fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
Amyloid beta peptides are derived from beta amyloid precursor protein (APP). The present sequence represents an amyloid beta peptide related peptide, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                     New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                      New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

amyloid peptide variant or beca-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.

                                                                                                                                                                                                                                                        ð
                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (App) soluble fragment or C-terminal fragment. The beta-amyloid or App preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The present invention relates to antigenic products (A), comprising a dendritic polymer built on a core molecule which is at least difunctional to provide branching and containing up to 16 terminal functional groups to which an antigenic peptide, that comprises an epitope of a deposit-forming polypeptide involved in plaque-forming disease, is joined by covalent bonds. The antigenic products are useful for eliciting an immune response against a deposit-forming polypeptide involved in a plaque-forming disease or disorder, e.g. Alzhelmer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, Creutzfeldt-Jakob disease, Kuru, Gerefmann-Straussler-Scheinker disease, fatal familial insomnia, scrapie or bovine spongiform encephalitis, by present sequence is one such antigenic peptide, which was used to illustrate the invention
                                                                                                                                                                                                                                                                                                      Antigenic product has dendritic polymer built on core molecule having terminal functional groups to which antigenic peptide that has epitope of deposit-forming polypeptide involved in plaque-forming disease is joined.
    fatal familial insomnia; scrapie; bovine spongiform encephalitis;
                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 8; 70pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises peptides which mimic the N-terminal region of

The present invention describes an immunising composition (A) comprising:

CC (a) an antigenic product (I) which induces an immune response against the

CC beta-secretase cleavage site of amyloid precursor protein (APP); and (b)

CC a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (1)

CC a molecule (II) comprising the antigen-binding part of an antibody (Ab)

CC directed against the beta-secretase cleavage site of APP; (2) a single cliamentous bacteriophage (FB) that displays (II), where this is a single contropic and neuroprotective activities, and can be used in vaccines or noctropic and neuroprotective activities, and can be used in vaccines or corresponse against the beta-secretase cleavage of APP and so prevents the formation of beta-secretase cleavage of APP and so prevents the formation of beta-secretase cleavage of APP and so prevents of for treatment and prevention of Albieimer's disease. The molecule (II)

CC response against the beta-secretase cleavage site of APP, secretase allowage site of APP, (3) and contains the antigen-binding part of an Ab directed against the action of Albieimer's disease. The molecule (II)

CC response site, or a filamentous phage that displays such an Ab (as a cleavage site, on a filamentous phage shad displays such an Ab (as a cleavage cleavage site, which is used in the exemplification of the
                                                                                                          immune response; beta-secretase cleavage site; amyloid precursor protein;
APP; nootropic; neuroprotective; vaccine; passive immunisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Immunizing composition, useful for treating Alzheimer's disease by inhibiting processing of amyloid precursor protein, also antibodies for
                                                      APP epitope spanning the beta-secretase cleavage site SEQ ID NO:5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 24; DB 7; Length 9; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an antibody molecule (I) capable of gpecifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App. Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence val-His-His-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-App. Val-Glu-ApA89887 or its fragment. Also described: (1) a nucleic acid molecule candom g(1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (I) comprising the vector of (2); (4) preparing (I) comprising the vector of (2); (4) preparing (I); comprising (I); and recovering (I) from the culture; (5) a composition comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I); (1); (8) testing the resulting Fab optimisation library by panning (2); (1); (9) testing the resulting Fab optimisation ilbrary by panning (2); (1); (9) testing the resulting Fab optimisation (1); and formulating the composition, comprising optimisation of (1), and formulating the composition, composition prepared by method (8); (1) as expressing cotimised antibody/antibody/molecule with a carrier; and (12) a composition prepared by method (8); (1) as optimised antibody-molecule with a carrier; and (12) a composition prepared by method (8); (1) has (1) has confident to notropic and antiparkinsonian activities, and can be confosition and/or treatment of a disease associated with a carrier; and (12) and of or the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the distingent of peter-amyloid plaque formation. The amyloid plaque formation. The amyloid dementia, Alzhelmer's disease, hereditarly erebrail hemorrhage with corruction of the disease, hereditarly erebrail hemorrhage with amyloidosis Dutch type, Parkinson or disease, HIV-Tellated demen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                              the purpose of the beta-secretase cleavage suit minimitarity comported for an antigenic product (1) which induces an immune response against the beta-secretase cleavage site of amyloid precursor protein (APP); and (b) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (1) a molecule (II) comprising the antigen-binding part of an antibody (Ab) directed against the beta-secretase cleavage site of APP; (2) a directed against the beta-secretase cleavage site of APP; (2) a chain Ab, on its surface; and (3) a composition containing FB. (A) has nootropic and neuroprotective activities, and can be used in vaccines or passive immunisation. (A) inhibits the cleavage of APP and so prevents the formation of beta-amyloid. (A) can be used to induce an immune contains the beta-secretase cleavage site of APP, specifically that contains the antigen-binding part of an Ab directed against the cleavage site, or a flamentous phage that displays such an Ab (as a cleavage site, or a flamentous phage that displays such an Ab (as a

The present invention describes an isolated amyloid beta peptide or its chomologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of each amino acids obtained in step (1); and (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in anyloid beta peptide has neuroprotective activity, and can be used in c vaccines. The amyloid beta peptide is useful for preparing a composition of preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence
                                                           New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                 The present invention describes an isolated amyloid deta peptide of the present invention describes an isolated amyloid deta peptide binding value of each amino acid of a subsequence of amyloid beta peptide binding value of a Historia is and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (C) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for a midividual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in composition for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                 a peptide, useful for preparing a composition for formation or progression of amyloid plaques for preventing

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, assed on the binding value of each amino acids of the subsequence, comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, correct or immunisation of an individual to a vaccine; (4) matching a vaccine comprising anyloid beta peptide to an individual based on the HLA haplotype of the individual; complicate to an individual based on the HLA haplotype of the individual; complicate to an individual or preparession of amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition or propession of amyloid plaques for preventing or treating Alzheimer's disease. The preventing and plate (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                          New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New amyloid beta peptide, useful for preparing a composition for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22-JAN-2004.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chain DG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADI36020;
```

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in composition for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (beta) peptide; which is used in an example ö New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence.

Comparing the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described:

(1) a vaccine comprising the isolated amyloid beta peptide; (d) predicting the reaction of an individual to a vaccine; (d) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, (e) a kit for matching a vaccine comprising a perial passed on the HLA haplotype of the individual; (f) a kit for matching a vaccine comprising anyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition of amyloid beta peptide is useful for preparing a composition of preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HIA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the homologue which is selected by a method comprising: (a) determining the binding value of each amino acids of anyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual based on the HLA haplorype of the individual; (5) a kit for matching a vaccine comprising amyloid beta individual; peptide to an individual based on the HLA haplorype of the individual; peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta apptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing an amyloid beta (Abeta) peptide, which is used in an example

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the laolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in anyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence
                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example from the present invention.
                                                                                                                                                                                                                                 Gaps

homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide binding value of a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids of the subsequence, c) comparing the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (d) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (d) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual passed on the HLA haplotype of the individual; (f) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; and (d) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in the result of anyloid plaques for the individual for preparing a composition of anyloid planues for anyloid planu
                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes an isolated amyloid beta peptide or its

                                                                      ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an isolated amyloid beta peptide or its chomologue which is selected by a method comprising: (a) determining the homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide or or pon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of an individual to a vaccine comprising the section of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, (c) a kir for matching a vaccine comprising amyloid beta comprising the reaction of the HLA haplotype of the individual based on the HLA haplotype of the individual; c peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzhahmer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example

The present invention describes an isolated amyloid beta peptide or its chomologue which is selected by a method comprising: (a) determining the homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide cupon binding to a Hish class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, datermining the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (d) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for inmunisation of an individual based on the Hish haplotype of the individual; (5) a kit for matching a vaccine comprising anyloid beta peptide has neuroprotective activity, and can be used in amyloid beta peptide has neuroprotective activity, and can be used in cample or preventing the formation or progression of amyloid plaques for for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence or preventing or treating Alzheimer's disease. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of an individual beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (d) predicting the reaction of an individual to a vaccine; (d) matching a beta amyloid or homologue peptide to an individual, (c) for immunisation of an individual based on the HLA haplotype of the individual; (d) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; (d) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in composition for preventing or treating Alzheimer's disease. The present sequence or prevented in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               amyloid beta peptide, useful for preparing a composition for renting the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            amyloid beta peptide; vaccine; immunisation; neuroprotective;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids of the subsequence, c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of each amino acids obtained in step (1); and cc or diluent; (2) determining T-cell epitopes within amyloid beta peptide, or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, cfor immunisation of an individual based on the HLA haplotype of the individual; and (6) preventing the formatching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzhaimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                           The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising; (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (l) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual, and the HLA haplotype of the
                                                                                              New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                             individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaues. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing an example peptide is useful for preparing a composition for preventing Alzheimer's disease. The present sequence

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for individual; (5) a kit for matching a vaccine comprising anyloid beta peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (beta) peptide; which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (1) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual; (c) rimmunisation of an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition preventing or treating Alzheimer's disease. The present an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the

binding value of each amino acid of a subsequence of amyloid beta peptide

cupon binding to a HLA class 1 and/or class II molecule of interest; (b)

determining the resulting score of all amino acids of the subsequence,

based on the binding value of each amino acids obtained in step (1); and

comparing the resulting score to a preselected value. Also described:

(1) a vaccine comprising the isolated amyloid beta peptide and a carrier

co diluent; (2) determining T-cell epitopes within amyloid beta peptide;

(3) predicting the reaction of an individual to a vaccine; (4) matching a

consistent of an individual based on the HLA haplotype of the

conditional; (5) a kit for matching a vaccine comprising amyloid beta

conditional; (5) a kit for matching a vaccine comprising amyloid beta

conditional; (5) a kit for matching a vaccine comprising anyloid beta

conditional; (5) a vaccine comprising a vaccine comprising a composition

conditional; (5) a vaccine of an individual based on the HLA haplotype of the individual;

conditional; (5) a vaccine or progression of amyloid plaques. The

conditional peptide has neuroprotective activity, and can be used in

convectines. The amyloid beta peptide is useful for preparing a composition

convecting or treating Alzheimer's disease. The present sequence

represents an amyloid beta (Abeta) peptide, which is used in an example

convection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (s) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. c (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; c peptide to an individual based on the HLA haplotype of the individual; c and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition cracines. The amyloid beta peptide is useful for preparing a composition progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example from the present invention. 8x88888888888888
